

I want immigrants to fight a lawsuit. Can you help me?

preface:

I had a wonderful student days. Since the university began to suspend classes, I really faced the society and experienced a bumpy journey that ordinary people do not have. Some people say that I can write a novel with my experience.

It is a horror film with a murder plot.

I have never been a reluctance to politics, and devoted myself to technology development. Unfortunately, I was still swept into the vortex of politics and became an innocent victim. Who will be the next innocent victim in a "rule of law" society that lacks justice

I am 76 years old (1945.8.3). Half a life in a lawsuit, fight on despite repeated setbacks. I ask that it be based on facts and take fairness and justice as the standard. China's judiciary ignores moral laws and regulations. Over the past 20 years, my appeal has failed, showing the ugliness and darkness of China's judiciary. In China, ordinary people are a worm that can be trampled on by power.

The rest of my life is very short, I will make the last effort to open the truth, the world has its own justice.

I tried hard, tried my best, and I had no regrets in this life.

I invented the AC variable motor.

Since the advent of AC motor, the "starting current and speed control" of AC motor has been a major issue that the world has been committed to solve for hundred years. My invention has solved this problem from a brand new perspective.

Before, the start and speed regulation of AC motor is using frequency conversion power supply, this technology is widely used, and is well known to the world, has become a common sense in popular science.

Now the frequency conversion power supply has obviously been eliminated.

Take the electric locomotive as an example, the use of variable frequency power supply must use a car to put the variable frequency power supply, look at the past electric locomotive pictures have such a carriage, now the high-speed rail pictures have no such carriage, indicating that the current electric locomotive has no variable frequency conversion power supply, is to directly drive the motor.

The technology I invented is that the motor can be driven directly by electric power to achieve the technical indicators of starting and steady variable speed.

My technology applied to the product through the Beijing Municipal Construction Commission identification, and in the tower crane got practical application and praise.

I can consult relevant technologies through patent retrieval, but no other technology can reach such a technical level. My technology is the only one.

If there are major scientific and technological achievements abroad that can replace the frequency conversion power supply, there will have been relevant reports, but I have not seen any information in this aspect.

My technology completely subvert the original power system, now, is not only is China's high-speed rail, shield tunneling machine , lifting, fan, pump and other large machine using I invented motor technology, and, without I invented the technology, not proud of China high-speed rail, nor the world's modern large machinery, because there is no alternative motor technology.

My invention makes China the most advanced country in the Power drive technology in the world.

Wicked people in charge, the most critical second part of my motor patent application waiting for 10 years, still did not escape.The State Intellectual Property Office of China even ignored the facts and completely ignored my repeated arguments, There is no any reason to insist that I used a special device that did not exist in my invention, and thus decided that I was "not fully disclosed", and rejected my patent application.

The State Intellectual Property Office has completely no bottom line of professional ethics, become an accomplice of the evil forces, in order to achieve the goal, use unscrupulous divisive tactics, even their own minimum face are regardless, do not want, a pair of ruffian rogue posture, how shameless, overbearing.

Local technology invented by the Chinese people, but the national government strongly denied it, so who abroad will say that it has adopted the technology that was invented by China.

The main key technology for high-speed rail is the powertrain, and Siemens offered \$1 billion in the negotiations to introduce the technology.

My technology completely subverts the original power system.

That's just my technology applied to high-speed rail.

Motor is a basic industrial product, wide application range, the number; motor is the heart of the whole machine, the improvement of motor performance can often produce the effect of making the whole machine replacement. Therefore, the invention has huge market potential, very high economic value, and will have a profound impact on the future.

Now, as the core technology of the mechanical heart, it has become a technology that anyone can use without an inventor.

I am the inventor of this technology, in the field of motor, the world is exclusive. However, this is just an inference, no legal basis, is not convincing, I will not only lose hundreds of millions of dollars of huge wealth, and also think that I am a criminal fraud, so my invention must be confirmed by the legal level, which is why I want to fight the lawsuit to the end with half my life.

In 20 years, I have called for fairness and justice in various ways. I have been writing a complaint letter to the Supreme Procuratorate for more than a year, not even answered.

All my indications are true, and the conclusions are simple and clear. Twenty years of real-name accusations, if I had a problem, would have caught me. Only because in my reference involves the former Politburo Standing Committee and Politburo members, and not just someone . Justice and disciplinary authorities are afraid to touch such senior officials unless the top leaders speak out.

I think this is the reason why my business has long been ignored and has been not solved. Therefore, I can only try my best to make things bigger and try to create strong pressure from

public opinion. However, the online posts involving politics are not allowed to be published. In China, where the people are unreasonable, I can only turn this lawsuit into an international lawsuit.

As a Chinese citizen, foreign aid may become "interference in internal affairs", and I can only change my nationality.

I personally do not have the ability to fight the corruption forces, I can only find partners.

"Equity and justice", China frequently calls for "fairness and justice" to the whole world;

"Human rights", China has frequently called to the world to "protect human rights".

After I become a foreign citizen, I will ask the host government to safeguard the legitimate rights and interests of their own citizens through "fairness, justice" and "human rights", just like the Chinese government protects the legitimate rights and interests of Meng Wanzhou.

Now, only the United States and the European Union in the world can talk to China, and I can only go to these countries.

I need to hire lawyers to deal with international litigation. With my financial strength, even if I am bankrupt, I cannot afford to hire lawyers, so I can only find partners in a community of interests. I will do my best to find partners with international influence.

I turn a lawsuit into project investment, and a large number of delivery investment cooperation advertising, I must also give investors an objective, comprehensive, real, detailed introduction of the environmental background of the investment project, this is the ethics of investment promotion and capital introduction, is my responsibility and obligation, so that investors have a comprehensive and thorough understanding of the project, prospective appropriate assessment of project investment risk.

I turn "litigation" into "project investment", and the partner is the investor of the project.

The whole process and all funds are provided by the partners.

I ask not only that my partners win the case, but also for high state compensation In "billions dollars" to determine the subject of the invention and the value of the technology.

I will use 50% of the compensation as compensation for the partners, which is "billion dollars as unit".

That is to say, partners complete the whole process of litigation and obtain economic benefits for me; I give the partners rich benefits, this is a transaction of economic interests, we are a community of interests.

For partners, they need to have an upfront investment, but not large, and the risk is predictable, the return after completing the project is extremely rich, 50%, billion dollars, such an input-output ratio is unprecedented.

Personally, only in this way, can I continue to uphold "fairness and justice" with greater efforts, fight the lawsuit to the end, and clarify the truth from the legal level:

Is it my insufficient patent disclosure, or is the State Intellectual Property Office careful efforts to dereliction of duty, abuse of power, blatant plunder?

Is it my world-class major scientific and technological achievements, or my shameless deception?

Is the court "fair law enforcement", or collusion with evil forces, is an accomplice of evil forces?

Is I the enemy of the country, or am I fighting against the corrupt interests and the evil forces of the country, to safeguard my legitimate rights and interests, and to safeguard my personal dignity?

Is who using public power, manipulating administrative justice, killing people, and doing many

evil things, has betrayed the country and harmed the national interests.

The case has a political background, but the lawsuit itself has nothing to do with politics.

The relevant content I provide is specific, true, clear and complete. The investor can investigate and evaluate all relevant content and I will fully cooperate.

This collaboration is completely legal and can operate in the sun.

Where people have no reason in China, only with serious consequences will they be held accountable. Tease the cancer is conducive to improving social equity and justice.

I urgently need to find world-influential partners, investors, and I want your understanding, support and help.

Can you help me?

My original idea of the "mother ship" was given to the country.

In fact, I have long invented the "diving mother ship", because the heart of potentate is secret, wanton act, I worry about the improper method of delivery, I was killed, China-American crash machine, I hesitated to consider again, and wrote a letter to Premier Zhu Rongji.

I didn't even apply for a patent at the time.

I know the value of the "diving mother ship", and I am sure that the plan will be implemented;

I also know that if someone moves flowers, I can no nothing.

It was ridiculous. Instead, I was a lamb to be slaughtered.

People with secrets are the most dangerous.

Standing at thirty is the time when human thinking is the most active. At that time, I had a lot of ideas, but I could do nothing. Ten years, 10 years, another 20 years, my youth is so wasted in the past, it is really a sin ah!

What did I do wrong? Some say I was born at the wrong time; some say I was living in the wrong place.

Fortunately, China also has a good man like Zhu Rongji and Wen Jiabao, they are good national leaders, they are the mainstay of the country. It is really a great blessing for the country and the people!

A lesson, a lesson to the future.

The technical problem that I have been thinking about intermittently for many years has suddenly made a critical breakthrough recently, and I came up with a whole new solution that will be a major disruptive invention.

Older age, I also have a strong sense of urgency, and since god gives me inspiration, it will let me complete this invention in this life.

appendix:

Complaints, reports and mailing vouchers of the Supreme People's Procuratorate

Overview: The sorrow of invention (a death penalty case suspected of murder)

People's Daily: The story of the dragon

Application for invention patent of AC speed governor motor

The Bank of China Treasury bond case
Invention patent application of "diving mother ship"
follow-up of invention patent application of "submersible ship" (1)
Heating fee case
