

## Canvass business orders announcement

I want engage in a lawsuit by immigration,can you help me?

The starting current and speed regulation of the AC motor have been the major issues that have been solved in this field for hundreds of years, **frequency control** is not only restricted by the performance of electronic devices, moreover, the concussion on the AC power supply network and the additional loss of the current square are the serious defects that cannot be overcome.

My invented AC governor motor completely solves this problem from a new perspective, will be applied to all large and medium power AC motors, promote the replacement of complete mechanical machines, lay the foundation for the development of high-power machinery. such as china's electric locomotive power system is using my technology, without the motor I invented, there would be no 《Chinese high-speed rail》; Especially for wind power generation, the efficiency of dozens, hundred of times, will achieve the perfect vision of energy and environmental protection.

The AC speed-regulating motor that I invented is of great economic value.

The Chinese Intellectual Property Office has insisted that it had used a special device that did not exist in my invention, he decided that my disclosure was insufficient and rejected my invention patent application, not only did I suffer great loss of economic benefits, instead, I become a fraud, so I had to legally confirm my patent for my invention.

I have been consistent for many years, including all the main and secondary subjects are the full marks, by 《Beijing Three Good Student》 graduated from high school. In 1963, I entered the Department of Radio and Electronics of Peking University with the No.1 in the National College Entrance examination. The school system is 6 years, after graduation, raised my theory of magnetism in 1980, In 1982, the AC speed regulating motor was invented, and the submersible mother carrier was invented In the 90s etc.

I never wish to refer to politics, engaged in science and technology development wholeheartedly, but I was been Still become an innocent victim of the death penalty case for prevent divulgence of some people 's secrets, it also deprived me of the right to retire normally by unfounded reasons, and haven become an "unguaranteed old man" receiving welfare pension recognized by the national social security agency.

This society is really too bullying people.

With half my life, I called for fairness and justice, from relevant ministries and commissions under the State Council to the Supreme Court, the Supreme People's Procuratorate, the Standing Committee of the National People's Congress and the National Committee of the Chinese People's Political Consultative Conference, for decades of neglect.

In China, the people are a worm, can let the power bullying trampled, local ruffian and rogue,

ugly and shameless.

In China, the whole dark and corruption, where the people have no the place to argue, I can only attract investment, turn the case into venture capital of the project, by changing the nationality, turning the case into an international case, seek the help of government and international organizations, and promote fairness and justice in China, to eradicate high-level corruption groups and improve the national rule of law.

My investment is a partner seeking a community of interests and a mutually beneficial cooperation of commercial interests, that is, I entrust the partner not only to win the case, but also a high state compensation to reflect the great economic value of my invention, the whole process and expenses are borne by the partner; I take 50% of the state compensation as the return and compensation to the partner.

Modern magnetism theory has been written into the university physics textbooks and related science and technology books of all countries over the world. It is a recognized theory in the world science and technology circle, and it has not changed or developed for hundreds of years.

I think the basic theory of modern magnetism is wrong, which is the fundamental reason why magnetism theory has not progressed in a hundred years. My proposed theory of magnetism has completely overturned this theory.

Basic theory is the source of a series of inventions. When I rely on my subversive theory and the subversive inventions from it are widely adopted and applied by the world, my theory will be recognized by the world science and technology world.

According to the selection criteria of the Nobel Prize, those who can overturn the existing physics theory can win the Nobel Prize. Some people say that I will win the Nobel Prize for this theory.

I never compare with the people around me, which is meaningless. In my opinion, the competition of science and technology is the global competition, only has the first, no second.

My information is detailed on the website "[dxblsntzbq.com](http://dxblsntzbq.com)", which was completely created and run by me alone.

I am 78 years old this year (born 1945.8.3), this society has exhausted my youth, I have obviously felt the decay of my constitution, can my body support me for another ten years, can I live for another ten years?

My time is soon the end of the, I tried my best, tried, determined to fight the case to the end. I want immigrants to fight lawsuits, can you help me to contact a well-known public relations company or partners.

Tian Yongning
