

Submarine battle group

Submarine battle group, a way to improve the survivability of a submarine and its combat effectiveness.

The Submarine battle group is composed of the submarine mother boat and the submarine son boats, mother boat is responsible for contacting the base and directing the son boats; the son boats are responsible for guarding the the mother boat and executing order of the mother boat and attack tasks. The overall structure of the Submarine battle group is similar to that of the land army, the mother boat is the commander, hierarchical management, and the son boat is a single combat soldier. The size of the Submarine battle group can be randomly adjusted, and the number of boats can be more or less, reaching hundreds or thousands.

Due to the single function and the clear division of the every boat , so the internal structure and the number of personnel of each boat are greatly reduced.

minimize the volume of the capsule, improve the resist compression capacity of the sealing compartment, increase the diving depth, and reduce the manufacturing cost.

The sealing compartment is divided into two parts: high pressure and low pressure.

The high pressure cabin is in the low pressure cabin, the low-pressure cabin consists of a rigid bracket and a flexible shed cover. When diving deep, the low-pressure cabin folds and contracts, so without pressure; during safe diving, the low pressure cabin is supported to give passengers a large and comfortable activity space.

The high-pressure seal capsule is similar to the aircraft cockpit, and the crew is similar to the aircraft pilot.

The sub-boat is rated with 2-3 crew members.

Because is outside the pressure cabin of the boat, A missile similar to an aircraft's external mount, there is no limit on the number and type of torpedoes, such as heavy and light torpedoes, which can also be equipped with air-submarine-launched missiles, it is can configured as needed. The torpedo operate as driving force for

the boat before launch, controlling the running state of the boat by controlling the torpedo. Its fuel is supplied by boats, similar to the aircraft's auxiliary tank, and fuel is supplied by the torpedo itself after the launch .

The fuel of each boat is placed in the fuel bag outside the boat. The fuel bag is flexible. No matter the diving depth and how much fuel remains in the fuel bag, the pressure inside and outside the fuel bag is always automatically balanced, and the packaging bag is without pressure.

The packaging bag jacket is a rigid, not-airtight protective case, which can automatically fold down to fit the amount of fuel placed inside the packaging bag, maintaining the boat shape and reducing resistance.

The overall design of the boat is flat, similar to the flat fish, usually the boat plane is vertical to the sea level, to minimize the overlooking area, and avoid strikes from the air. The boat plane can be flipped 90 degrees parallel to sea level to accommodate shallow water operations. If walking parts are added at the bottom, they can be used for beach landing.

When the submarine mother carrier is moving, each boat is 200-300 meters apart, and it maintains communication in the form of sonar relay.

The diving mother ship is scattered, small size, deep, large number, air self-defense ability, and there are a lot of noise in several square kilometers, it is difficult to lock and attack underwater specific moving target, so not afraid of other discovery and any form of attack, do not have to too much consider their own noise problem.

Diving mother ships can have thousands of torpedo attacks, enough to destroy any type of warship formation, sweep up all water and port targets, with the ability to block large areas of the sea.

The diving mother ship is the invincible sea overlord.

Diving mother ship are extremely low to manufacture and convenient for mass production.

Modular structure easy to storage, transportation and assembly.

Diving mother ship can be assembled and trained in inland lakes for easy concealment.

Diving mother ships are conventional weapons that can influence the strategic pattern of the world.
